The Test of Handwriting Skills – Revised (THS-R)

Overview
The Test of Handwriting Skills – Revised (THS-R; Milone, 2007) is a standardized, clinician-administered assessment of manuscript and cursive handwriting used with students ages 5 to 18 years. The THS-R takes approximately 25 minutes to administer and score, and may be individually or group administered. It consists of eight tasks that measure how a student writes upper- and lowercase letters, numbers, words, and sentences. These items are written in one of the following ways: from memory, by copying, or from dictation. The test also measures speed of writing, letter reversal, and case substitutions. It can be used with the Zaner-Bloser, Palmer, or D’Nealian styles.
